Mercury Medical Filters and Coronavirus (COVID-19)

Mercury Medical Exhalation Filters feature hydrophobic filter medium and are typically used with Mercury Medical self-inflating BVMs and Flow-Safe CPAP Devices along with other appropriate medical devices. These filters have been independently tested and found to be 99.75% effective on particles with an approximate size of 3.2 microns. They have not been tested specifically for filtration of the COVID-19 virus. Therefore, Mercury is unable to provide any information regarding the efficacy of filtration for this pathogen. Filters can only reduce the chance of transmission and will not eliminate the risk.

1055375 – For use with Mercury Medical BVMs
1055376 – For use with Mercury Medical Flow-Safe Devices
1055331 – PEEP Valve with integrated filter
